    class exception {
    }
    class DrawingIncomplete {
        + what()
    }
    exception <|-- DrawingIncomplete
```

The diagram shows a class hierarchy. At the top is a class named 'exception' with three empty compartments. Below it is a class named 'DrawingIncomplete' with three compartments: the top one contains the name, the middle one is empty, and the bottom one contains the method '+ what()'. A blue arrow with an open triangle head points from 'DrawingIncomplete' to 'exception', indicating inheritance.
